

Voice-Based Concept Understanding Analyser

Reference Concept: Machine Learning

Student Transcript

Visual Learning is a branch of water visual intelligence that enables computers to learn from data without being explicitly programmed. It uses algorithms to identify patterns, make predictions and improve performance over time. Visual Learning is widely used in recommendation systems, imagery, cognition, fraud, detection and the gear applications.

Audio Visualization

Evaluation Summary

Semantic Similarity : 58.19%

Filler Ratio : 0.0

Pause Ratio : 0.4019

Confidence (Energy) : 0.082

Final Score : 50/100

Understanding Level : Moderate Understanding
